Boil the crystallized Sulphur  
 of Iron in 6 times its weight of  
 water in a platinum or porcelain  
 vessel, to the boiling solution,  
 add Nitric Acid gradually so  
 long as muddy fumes are dis-

Cure for Frosted Limbs  
Dissolve  $\frac{1}{2}$  lb of Alum in  
1 Gallon of Warm Water,  
Soak the frosted part, before  
going to bed, for ten or 15-  
minutes. - Repeat it for  
several successive nights.

Also use the same for the face (face)  
and hands.

For Burns or Scalds  
Mix together a tablespoon  
of Soot, & 2 tablespoonfuls  
of Lard, spread on a rag,  
apply to the part -

For a sore

Soak the part affected in ashes  
& water. - Take the yolk of an  
egg, - 6 drops Spts. Turpentine, &  
a few best Raisins cut fine, &  
small quantity of Sweet Saffron  
one tablespoonful of Saffron or fine  
tobacco, - then add one  
spoonful of burnt Salt, & one of  
Indian Meal - it will cure  
to effect a cure, if applied  
in Season. -

So says a native

Black Salve

Red Lead 3ij  
Sulph. Precip. ʒi } w. d. after fire  
Amp. Prec. ℥xii  
Resin.

Heat them all together  
until it begins to turn black,  
remove from fire, & stir constantly  
till it begins to cool & thicken  
then add some Oil of Turpentine,  
continue stirring until cool. -

Black Salve

Amp. Precip. ℥xii  
Red Lead 3ij finely powdered  
Cera Alba ʒi

Put the ingredients in a pot  
over a slow fire, & stir  
continually till it is  
black: then pour it  
into a glass bottle  
to be used.

### White Wash.

Take one bushel of unslacked lime;  
 slake it with cold water; when well slaked  
 add 20 lbs Spanish Whiting, 17 lbs Sack  
 12 lbs Sugar. Strain this mixture through a  
 fine sieve, & after thinning with cold  
 water, it will be fit for use. -

For Straw Colour, add Yellow Ochre,  
 for Lemon, add Ochre Chaux & Yellow;  
 for Slate & Lead colour, add Lampblack  
 for blue, add indigo, - for green, add  
 Chrome Green, - in each case diminishing  
 the quantity of whitening in proportion.  
 for Portland Stone, add Yellow ochre & Span. Brown.

### Stucco White wash.

at President's house - Wash.

Take 1/2 bushel of unslacked lime;  
 slake it with boiling water, covering it during  
 the process to keep in the steam. Strain the  
 liquor through a fine sieve & stirrers  
 add to it a peck of Clean Salt, previously  
 well dissolved in warm water, 3 lbs of  
 ground rice, ground to a fine powder &  
 skin & boiled hot, - 1/2 lb of powdered  
 Spanish Whiting, 1 lb of Clean Sugar brown  
 dissolved. - Add 5 Gallons of hot water  
 to the whole mixture this is used as it  
 is found a few days covered from  
 the dust. -

For Burns & Scalds &c.

Take Nutmeg, Clove, &c., & any  
shoot of Elder, bruise them & tie  
them in a bag for about 3/4 hour, till  
the waters are extracted, then strain  
off & add 1 pt. Castor Oil - 1 lb. Lard  
to every gallon & use warm.

For N. & H.

For Sore Throat.

Take the flowers of St. John's Wort  
& put in a bottle of Sweet Oil, -  
hang it up in the sun, until the  
Colour of the Oil becomes yellow  
then it will be ready for use.

For burns, as well as a Sifted St.  
For bruises &c. Called Red Oil

For the Asthma - and all  
Rough & Sore Throat - Bleeding

- Ext. Conia ʒij
- For. Protocart ʒj
- Mine
- Water

Take 100 grains of

the Lix. a ~~tablespoon~~ <sup>tablespoon</sup> 3 times a day.

For the ... ..

12. Chloroform

Take 6 Pillsbury's Pills, then a  
bottle in a minute so as to  
increase the price by 100 per cent,  
and 300 Pillsbury's Pills of  
fine dust, 1 in 1000 & Sprinkle  
of flour to make a paste.  
Spread the plaster on a piece  
of silk or cloth, & sprinkle a  
small quantity of muslin, &  
not sufficient to blister but  
just to irritate the skin, & apply  
to the affected part.

# For Asthma

1/2 Vermacete 3j

Peppermint 3j

Essence 3j

Ess. Bitart 3ij

Ess. Acid. 3ij

Pulverise & pass thru a sieve -

3. Teaspoonful every night.

"Papa"

Whitewash - cheap & good -

Take 1 Bush. of freshly burned Lime  
in a barrel, by covering the Lime with  
boiling water; then add cold water  
enough to bring it to the consistency  
of good Whitewash; then dissolve  
in water & add 1 lb. of White Vitriol,  
(sul. Zinc) & one quart of fine Salt -

To give this a cream color, add  
1/2 lb. Yellow Ochre (in powder) -  
- a more - 1 lb. Yel. Ochre & 1/4 lb. Indian Red.  
- a handsome gray stone color, 1/2 lb.  
French Blue & 1/4 lb. Indian Red,  
- a drab, 1/2 lb. Burnt Sienna & 1/4 lb.  
Venetian Red. -

For Brick or Stone, instead of  
1 Bush. Lime, - use 1/2 Bush. Lime &  
1/2 Bush. Hydraulic Cement. -

Bin. Comp. Conic

Add a Saloon of Water to the Pyramid  
or Potash - dip the article in it & stir it  
round quickly & immediately remove it  
& hold under a hydrant to wash off - dry  
it in an oven - (see no. 110)

# Onion's Mixture

Is one pound of Onion, cut in  
 small pieces, & of Sea water  
 six pint, being mixed in a  
 quantity of water.

Take an ~~poke~~ hepple of  
 garden lime, & when you see the  
 redness & sores of water, &  
 skin all together. Do so with  
 some part of the mixture, &  
 but add to the soap & water  
 within.

To this mixture add some  
 quantity of strong tobacco water.  
 And this compound should be  
 used in all, with a garden  
 watering to your plants or other  
 fruit trees, so as to cleanse the  
 back of the foliage. If no rains  
 descend in these parts, one  
 application will be sufficient.  
 If washed by rains, it should  
 be renewed.

"To be Observed"

Requires to be applied every  
 2 or 3 days from the time the fruit  
 is first for - (Even than good)

CP 1

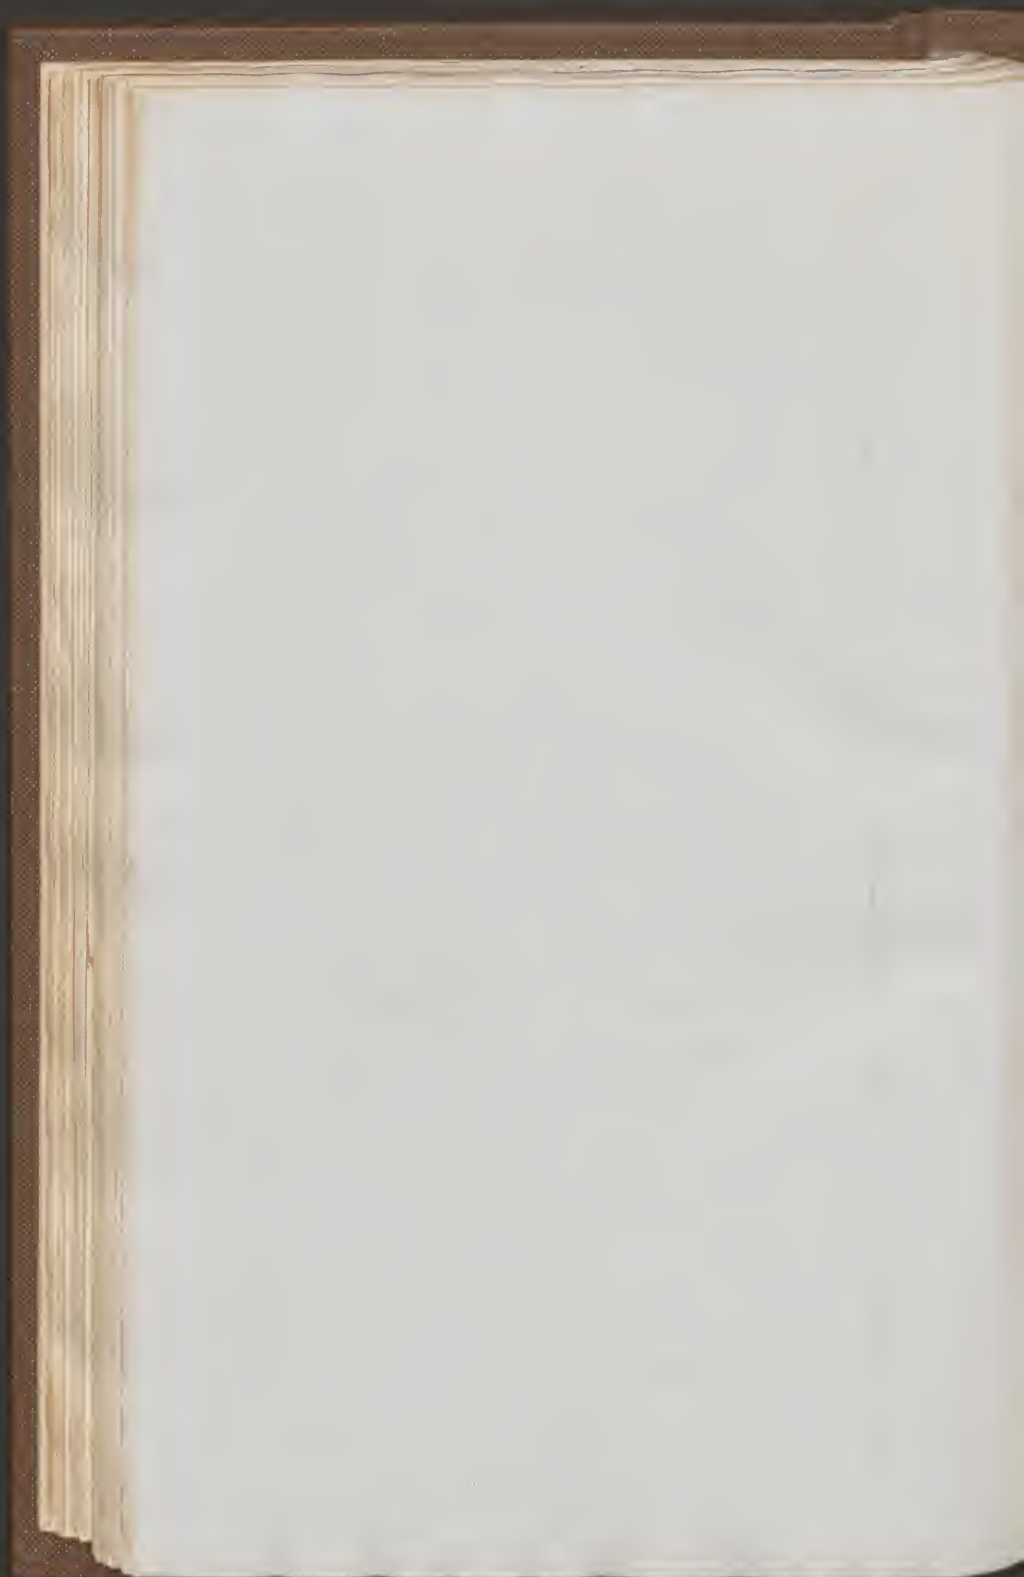

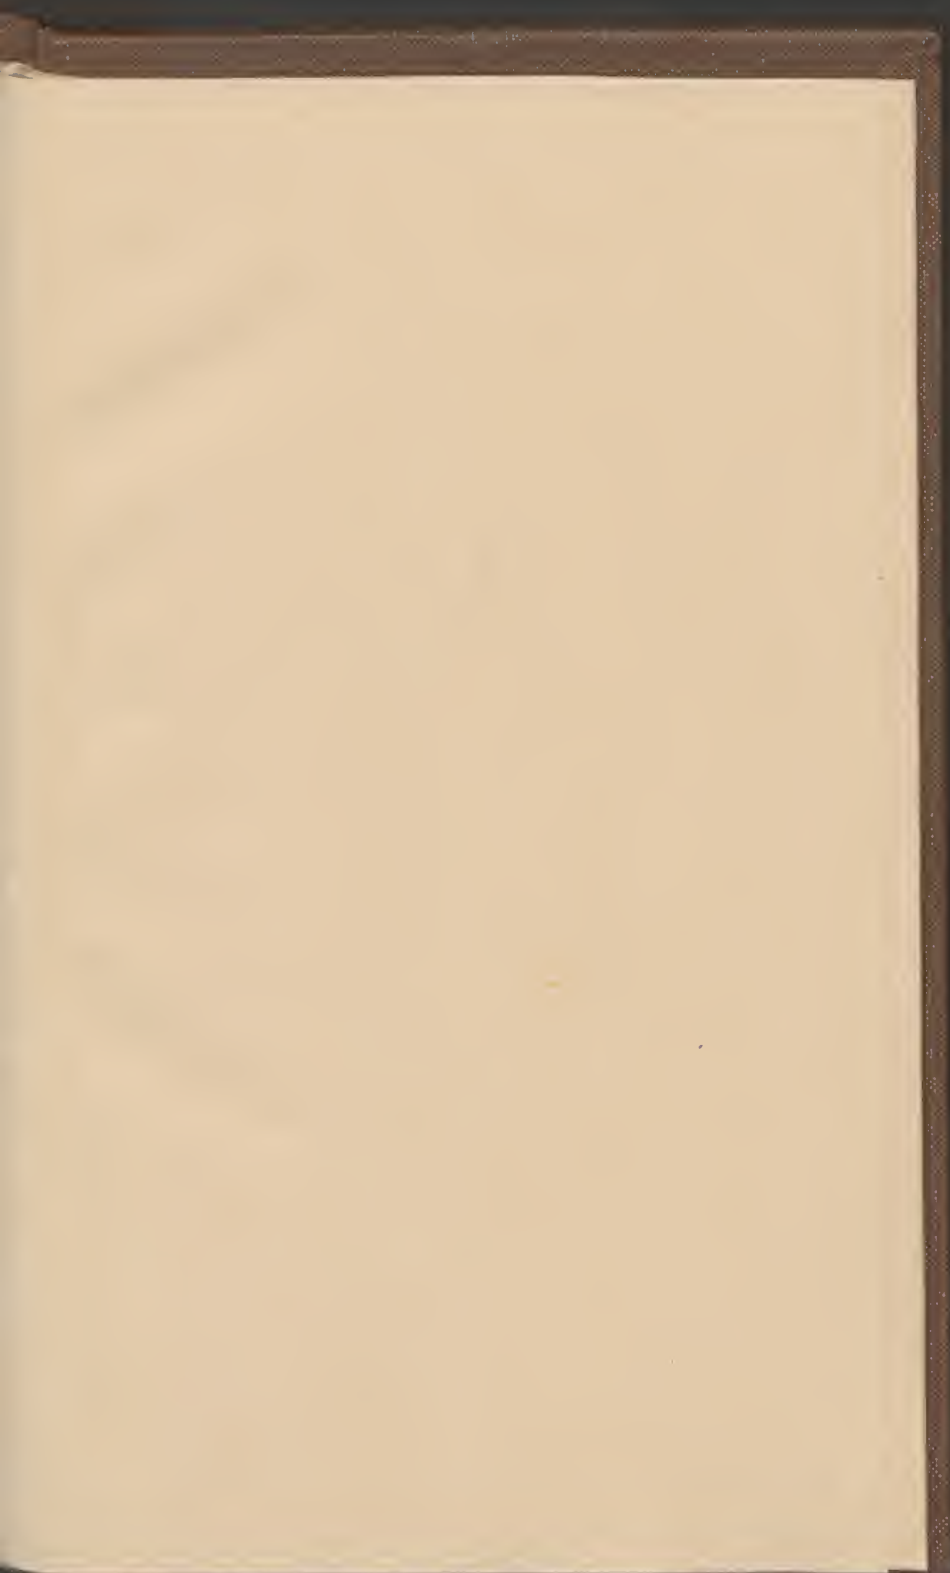

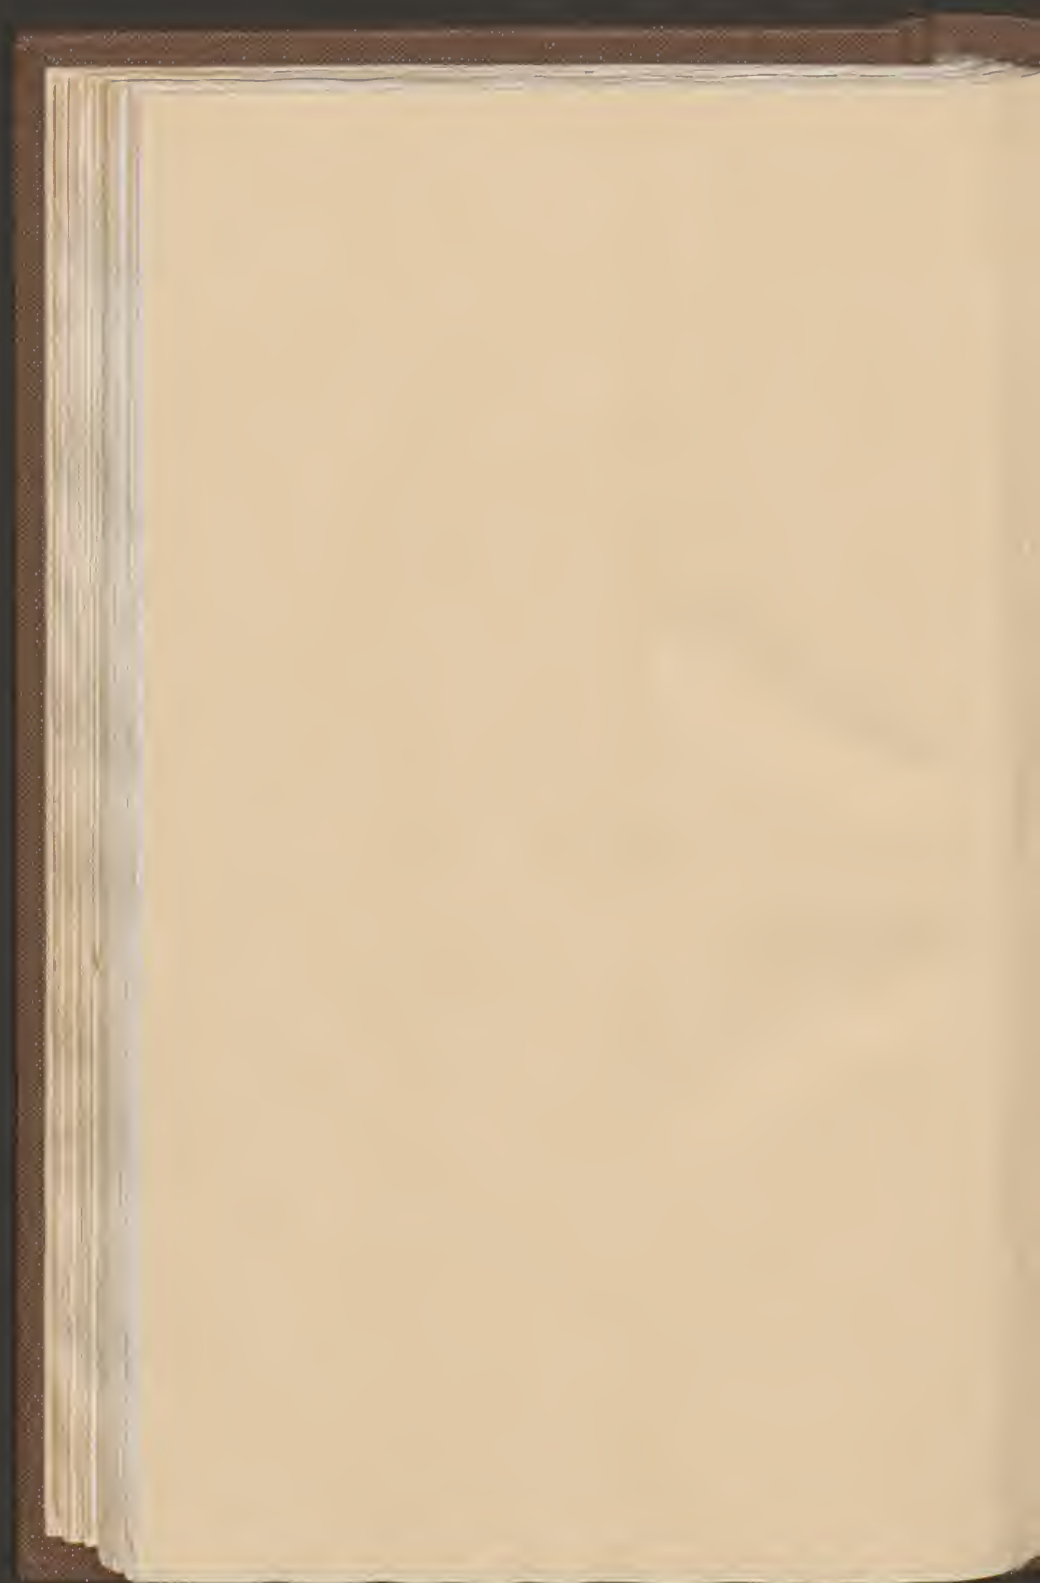

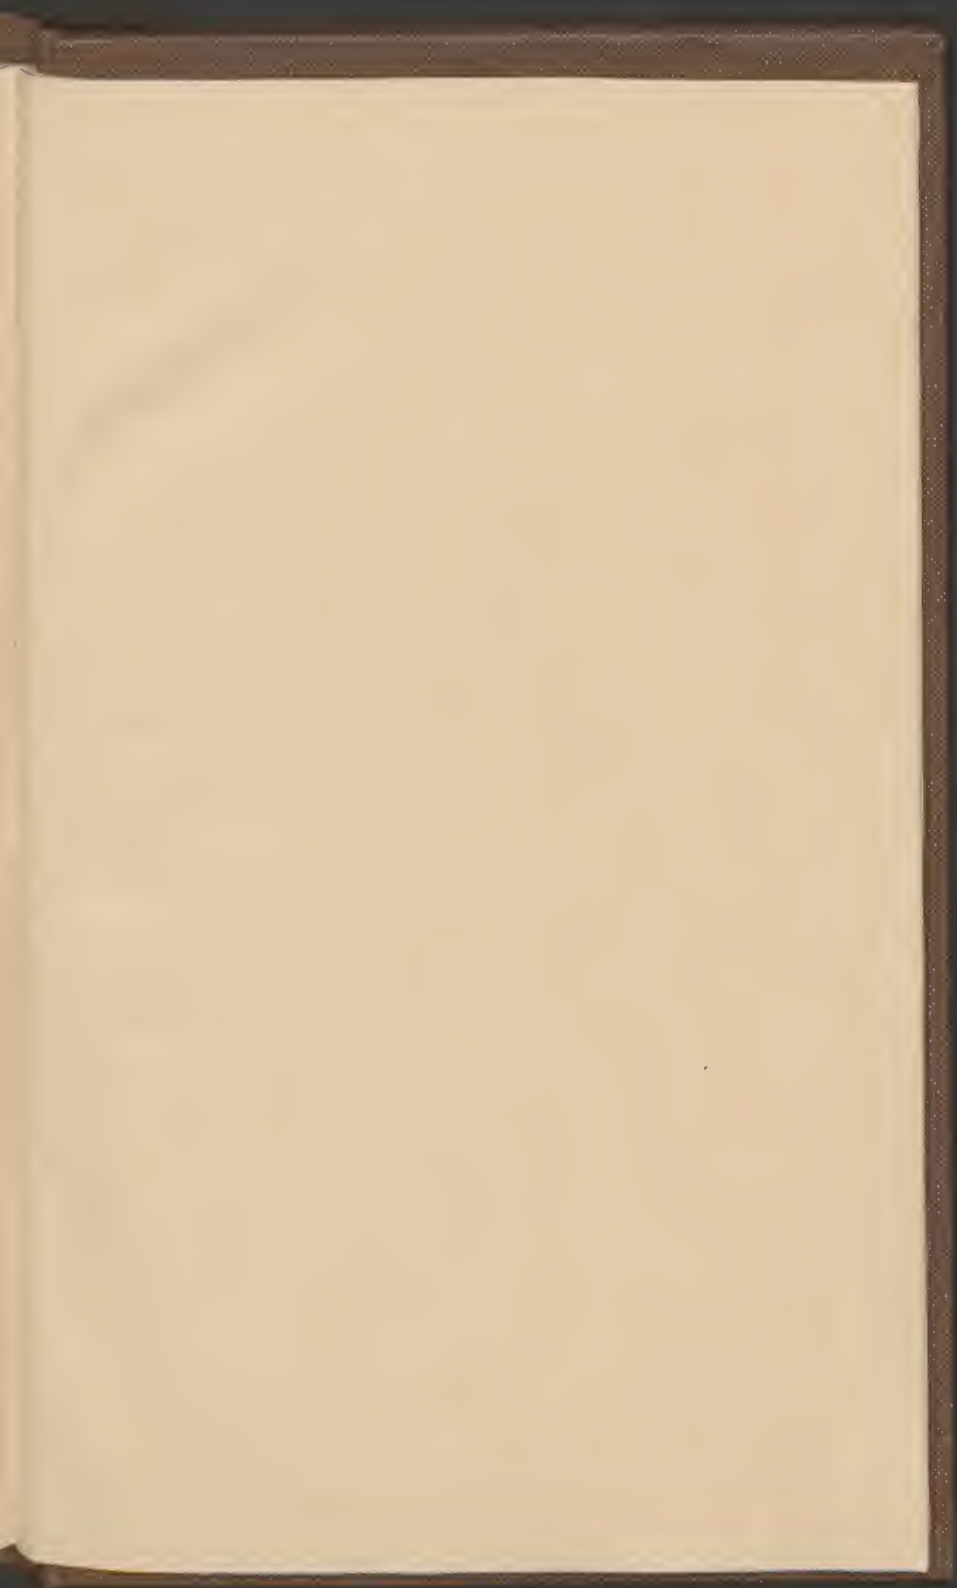

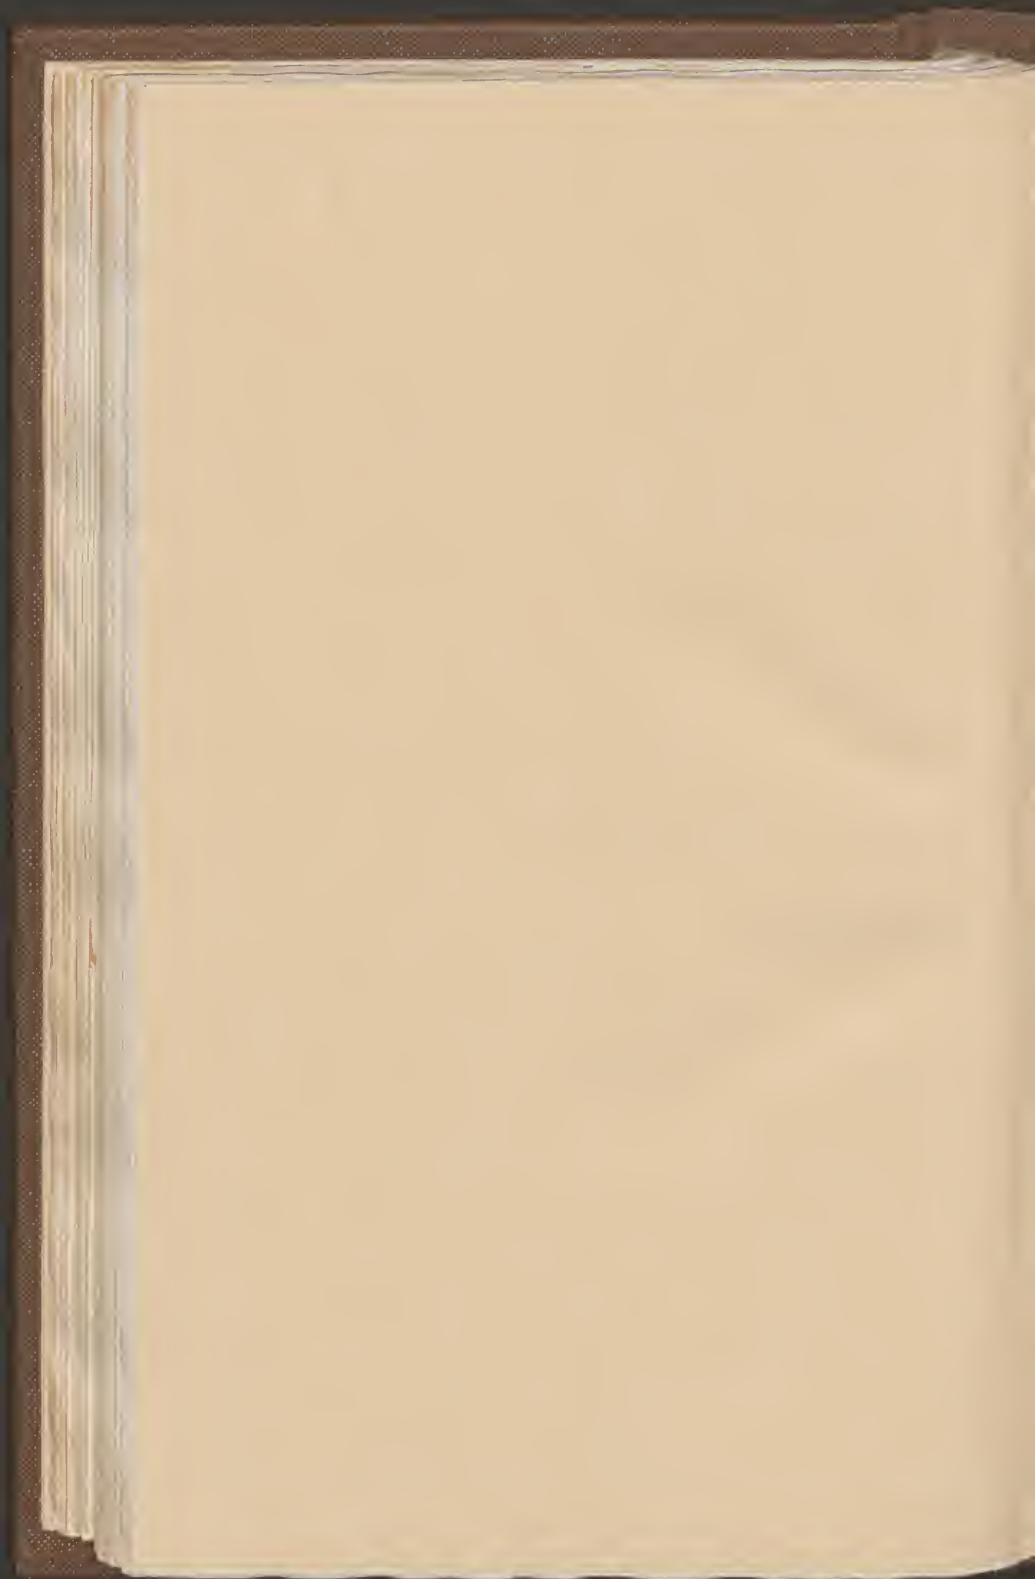

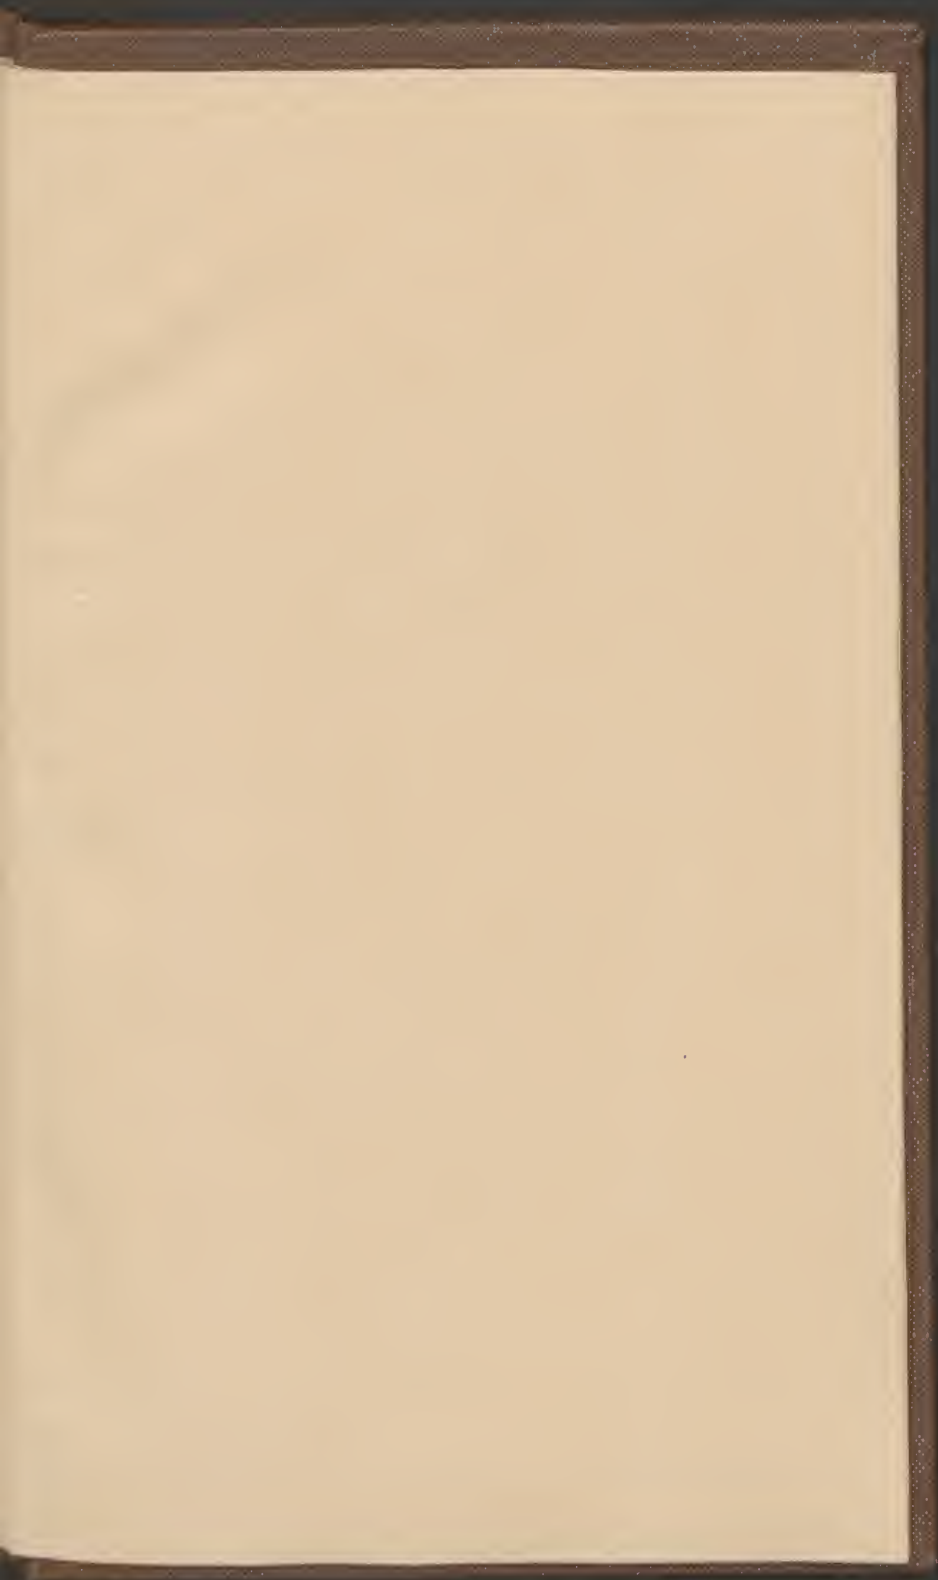

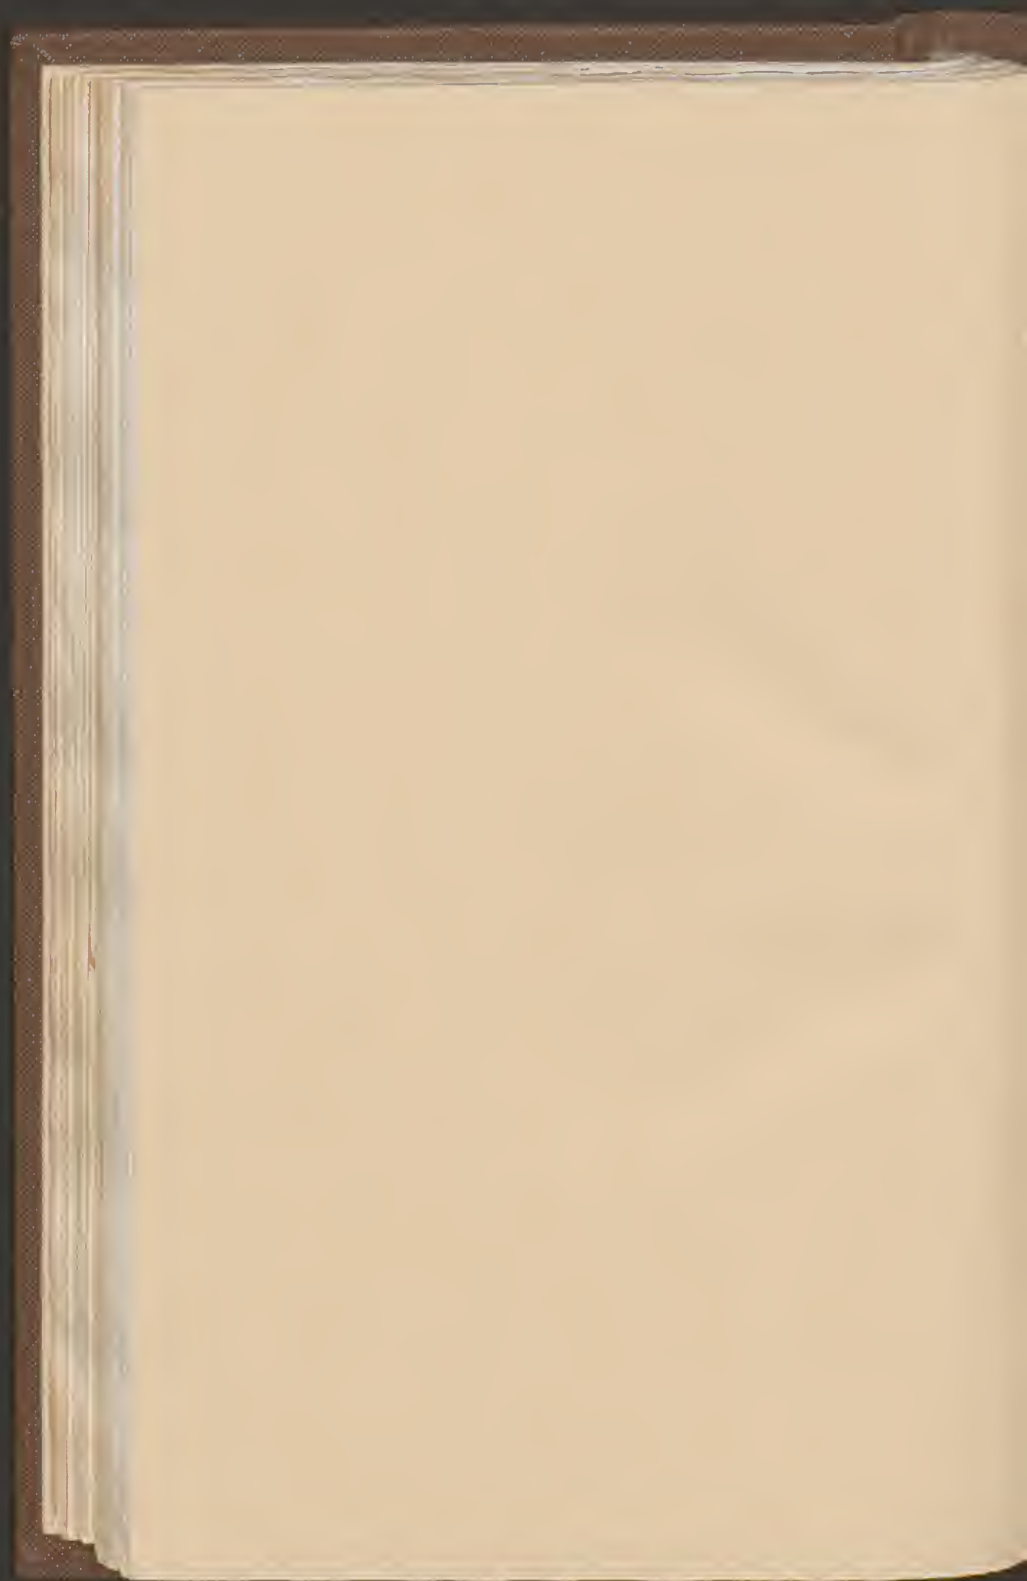

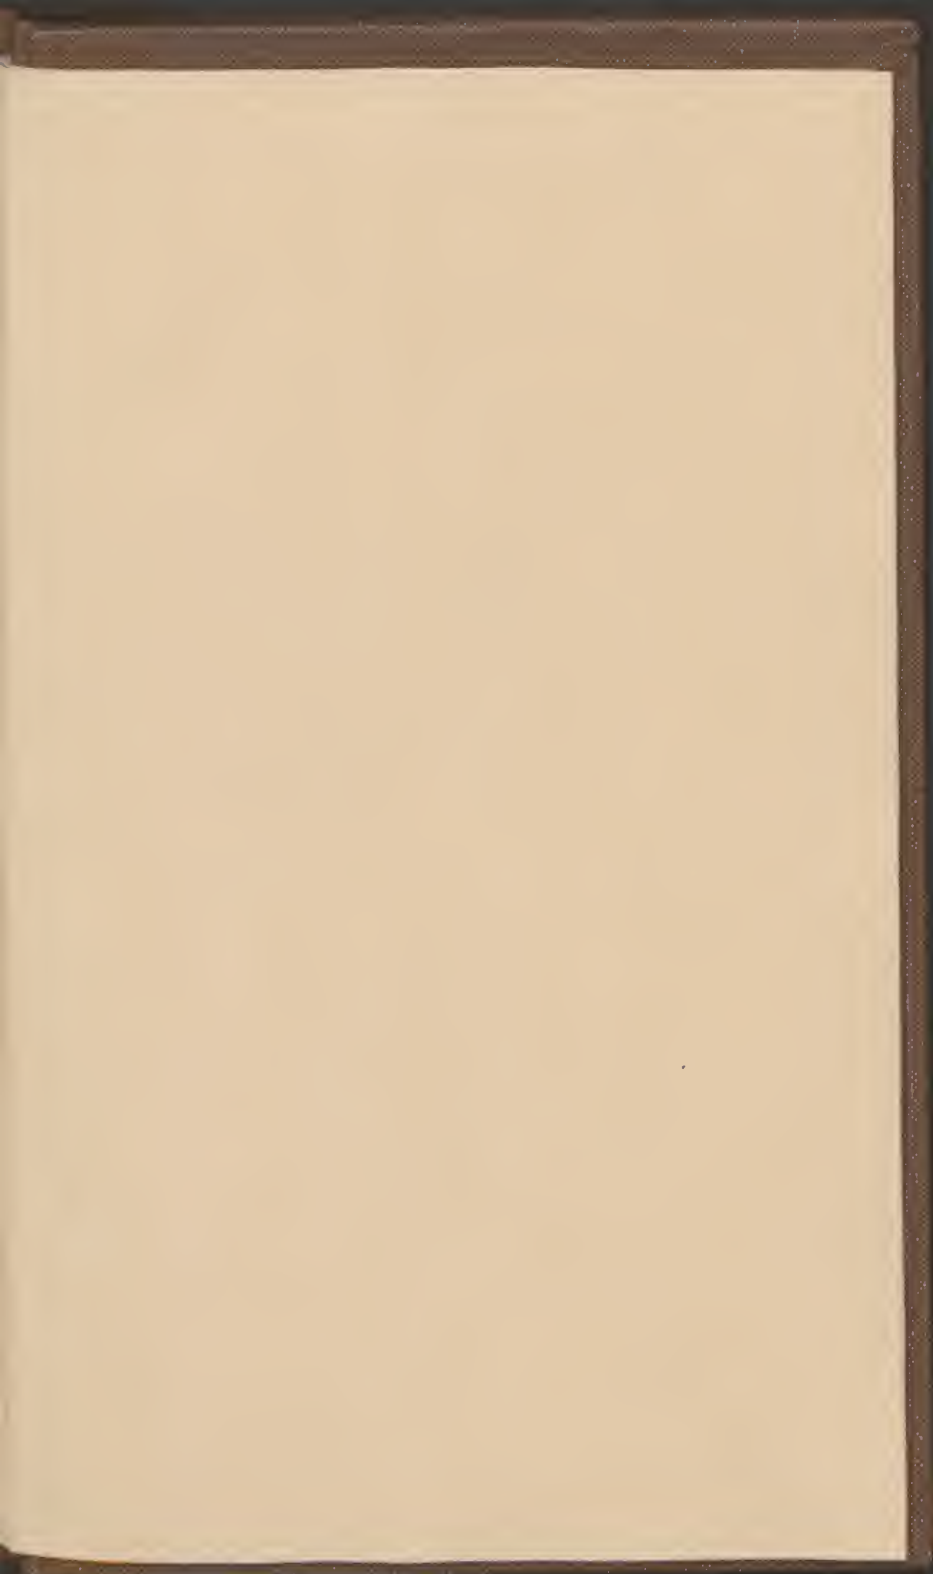

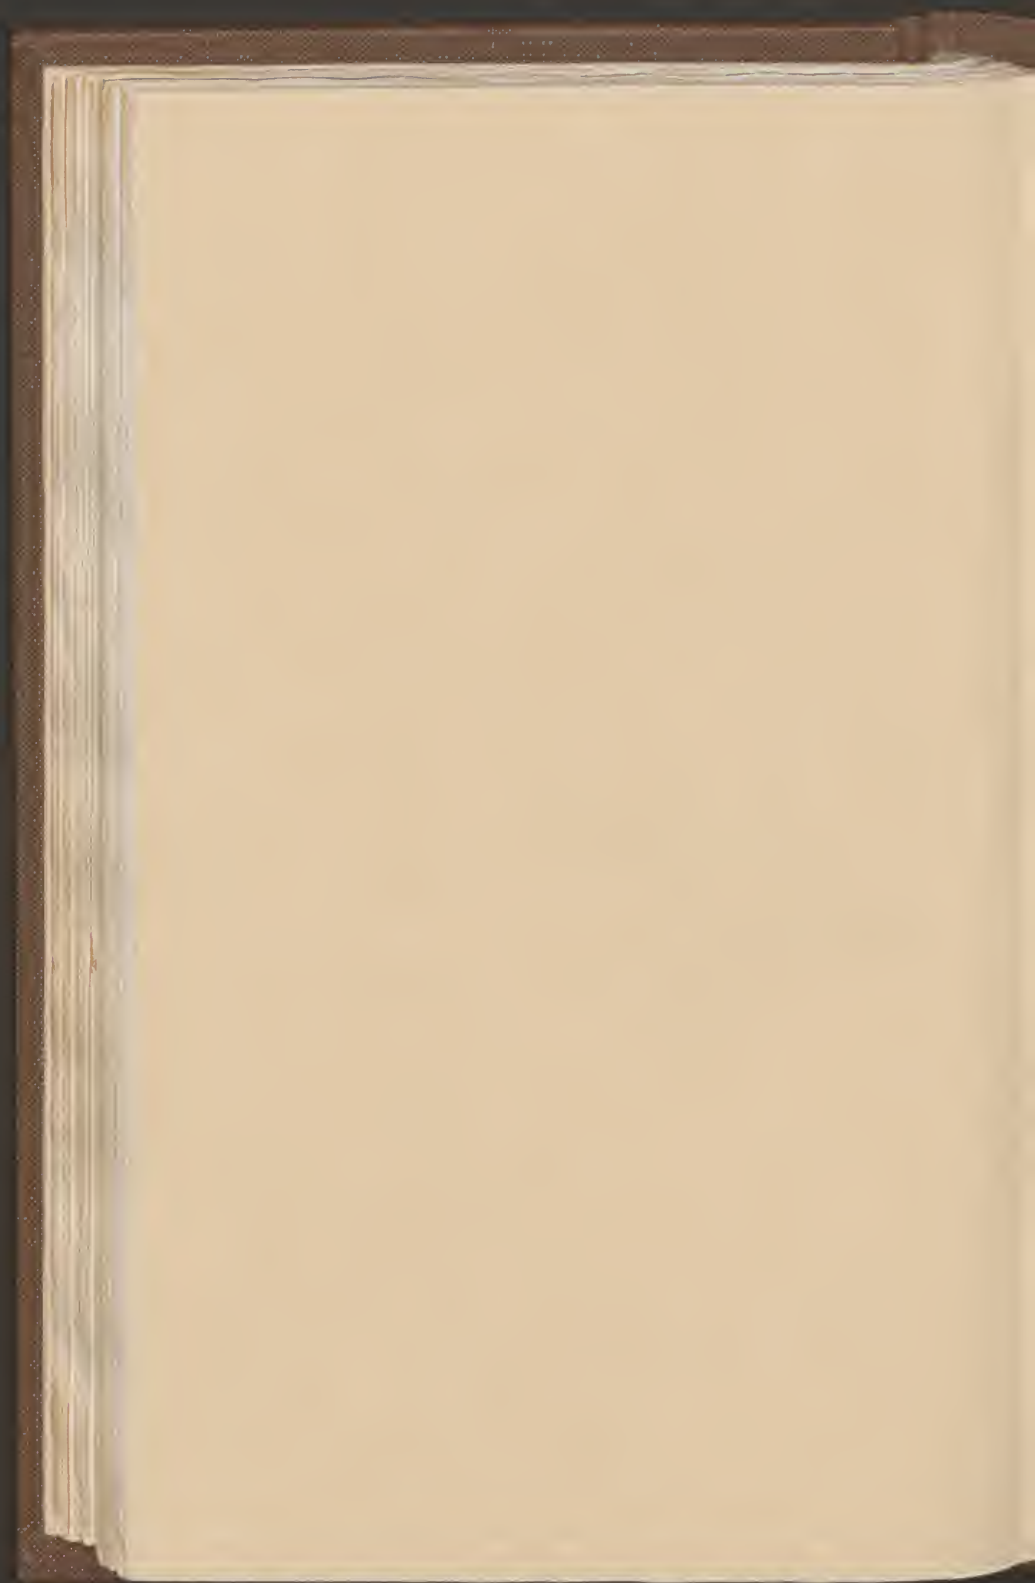

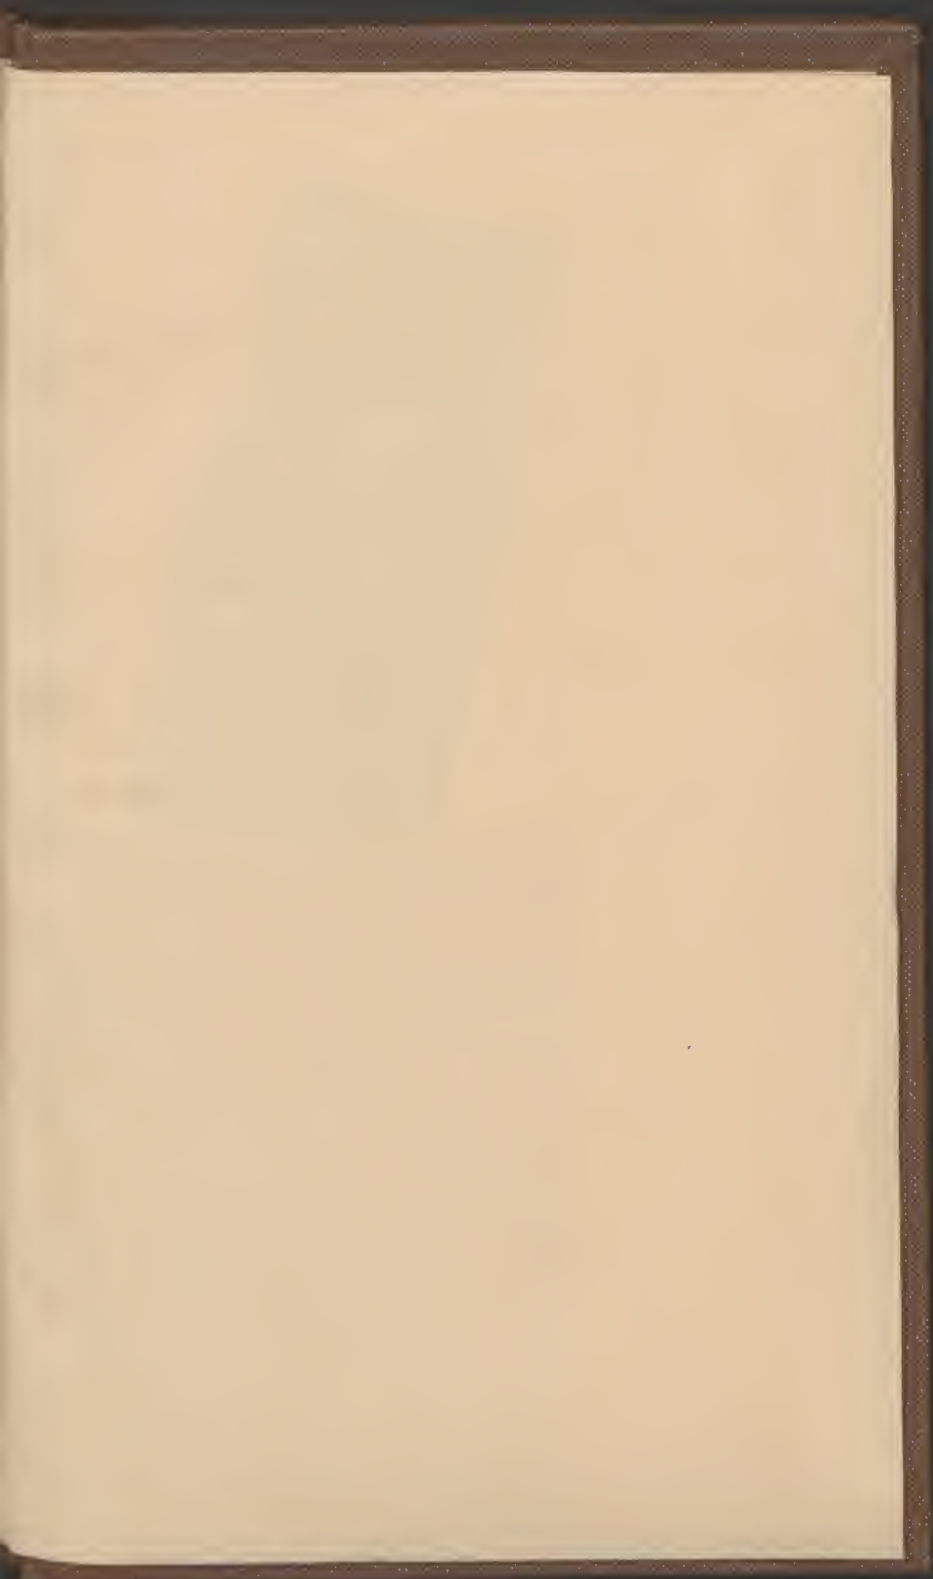

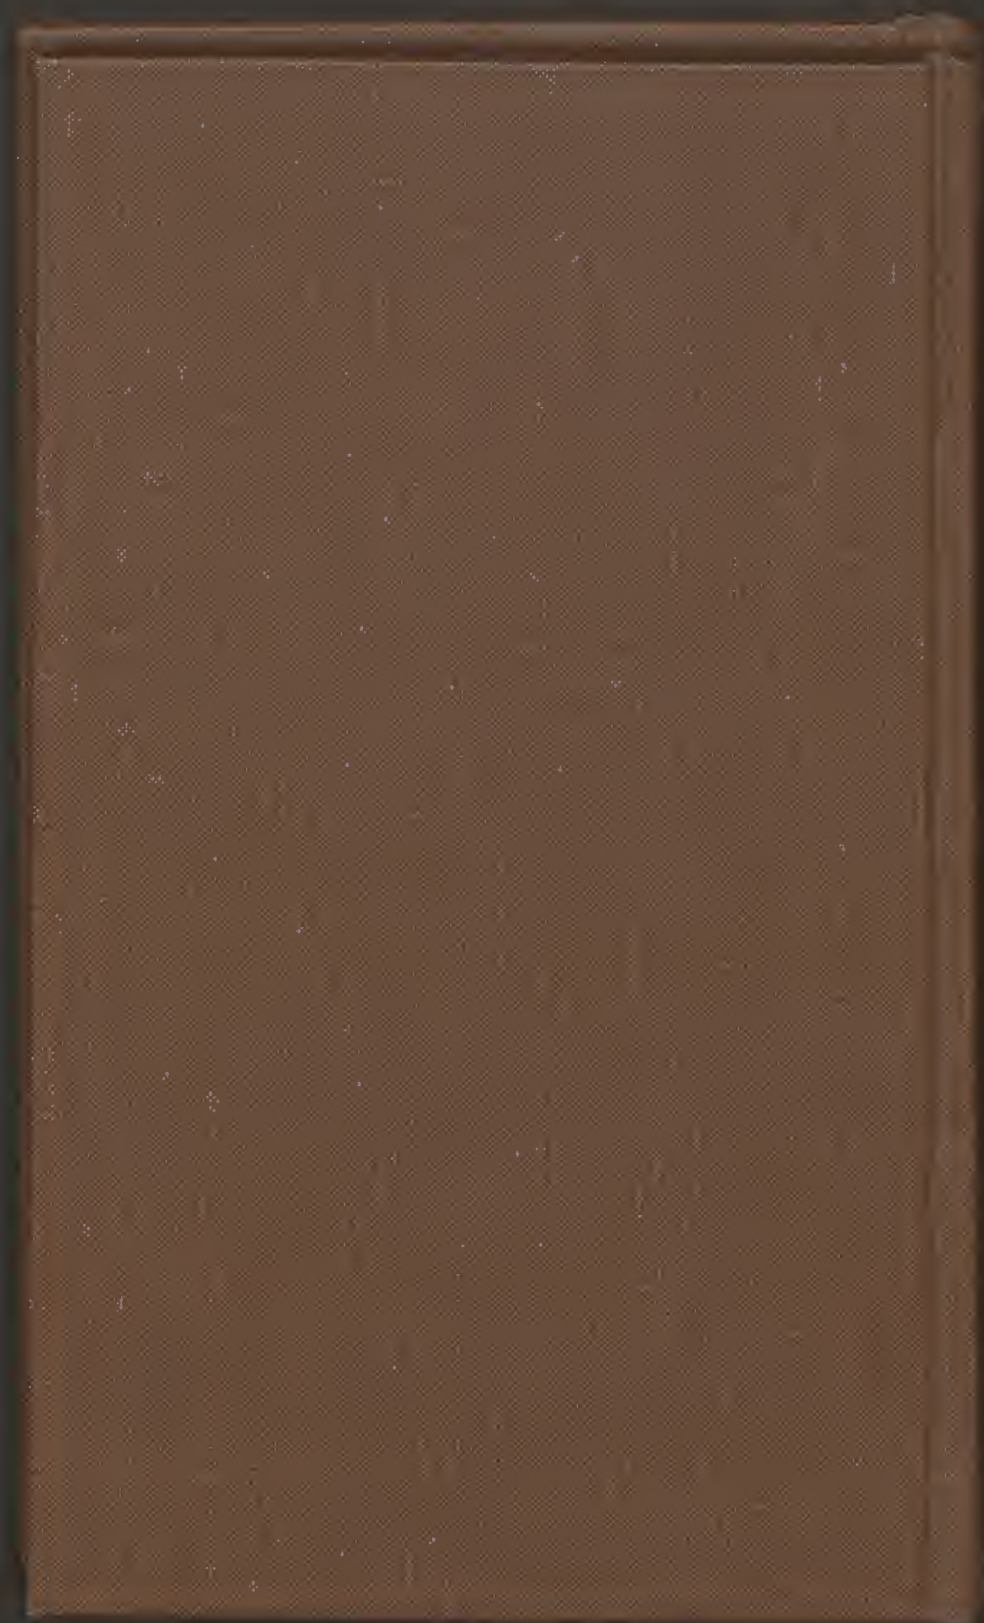

Elmer. Vol. 1.
National Library of Medicine
Bethesda, MD

Condition On Receipt: The half leather and decorated paper binding was extremely dirty, worn, abraded, deteriorated and powdery, particularly at the corners, edges, endcaps and joints. The joints and internal hinges were partially broken. The sewing was loose. The pages were dirty, discolored, acidic, weak and brittle. There were several loose enclosures at the beginning of the volume. The manuscript inks present were acidic and varied in intensity.

Treatment: The volume was collated and disbound. The inks were tested for solubility. The head, tail and pages were dry cleaned and washed and then buffered (deacidified) with magnesium bicarbonate solution. Tears were mended and folds guarded where necessary with Japanese paper and rice starch paste. The volume was sewn on linen tapes with linen thread. Windsor handmade paper ends with a linen hinge were attached. The volume was case bound in full cloth. A pocket was attached to the back cover to house the loose enclosures. Title information and lines were stamped in gold foil onto the spine.

Wash for Outbuildings.

I WANT to know how to make a good, permanent whitewash for outside buildings and board fences.—A. LAING, *Simcoe, C. W.*, 1859.

WISHING to know how to make a whitewash that is both durable and good, I thought the inquiry would perhaps be answered by you or your numerous correspondents. I have a fence inclosing about an acre of ground, a poultry house, and a small barn to whitewash, and I would like to have them appear well, and also the whitewash to last some time.—D. GETHAERT, *Williamsport, Pa.*, 1859.

Take a barrel and slake in it carefully, with boiling water, half a bushel of fresh lime. Then fill the barrel two-thirds full of water, and add 1 bushel of hydraulic lime or water cement. Dissolve in water and add 3 pounds of sulphate of zinc, (white vitriol,) stirring the whole to incorporate it thoroughly. The wash should be of the consistency of thin paint, and may be laid on with a whitewash or other brush. The color is pale stone color—nearly white. If you wish it to be straw color add yellow ochre, 2 pounds in powder; if drab, add 4 pounds raw umber.

Another good wash is made as follows:—Slake lime with hot water, in a tub to keep in the steam. When dissolved, and in a half fluid state, pass it through a fine sieve. Take six quarts of this lime and one quart of clean rock salt for each gallon of water—the salt to be dissolved by boiling, and the impurities to be skimmed off. To five gallons of this mixture, (salt and lime,) add one pound of alum, half a pound of copperas, three-fourths of a pound of potash, (the last to be added gradually,) four quarts of fine sand, or hard wood ashes. Add coloring matter to suit the fancy.

A correspondent of the *Country Gentleman* gives the following:—One bushel unslaked lime; half a gallon salt; three pounds alum, powdered; three pounds saleratus. Mix and put in a tight barrel with one head out. If the lime is quite fresh, cold water—if not, then use hot water. Keep stirring while slaking, adding water as required, so as not to become dry at any time. If it heats dry it becomes lumpy, and must not be overflowed with water so as to prevent the slaking going on. Stir up well from the bottom. When finished it may be thick as mush. When to be applied by a brush, make the mixture the consistency of whitewash—about the thickness of cream. Apply the first coat very thoroughly, filling every crack or interstee between the bricks or in the boards. For wooden fences a second coat of the same material is all that is required. Those who desire to have some other color than white, can add coloring matter to taste.

FOR BRICK HOUSES.—For the second coat, add to the first named materials 12 pounds melted tallow, and mix as before. This coat is impervious to water—is brighter, looking clean longer than paint, and preserves the cement between the bricks better than paint.

Two quarts skimmed milk; 2 oz. fresh slaked lime; 5 lbs. whiting. Put the lime into a stoneware vessel, pour upon it a sufficient quantity of milk to make a mixture resembling cream, the balance of the milk is then to be added; and lastly the whiting is then to be crumbled and spread on the surface of the fluid, in which it gradually sinks. At this period it must be well stirred in, or ground, as you would other paint, and it is fit for use. There may be added any coloring matter that suits the fancy. It is to be applied in the same manner as other paints, and in a few hours it will become perfectly dry. Another coat may then be added, and so on, until the work is completed. This paint is of great tenacity, and possesses a slight elasticity, which enables it to bear rubbing even with a coarse woolen cloth, without being in the least injured. It has little or no smell, even when wet, and when dry is perfectly inodorous. It is not subject to be blackened by sulphurous or animal vapors, and is not injurious to health. The quantity above mentioned, is sufficient for covering 57 yards with one coat.

Take a barrel and slake in it carefully, with boiling water, half a bushel of fresh lime. Then fill the barrel two-thirds full of water, and add one bushel of hydraulic lime or water cement. Dissolve in water

and add three pounds of sulphate of zinc, (white vitriol,) stirring the whole to incorporate it thoroughly. The wash should be of the consistency of thin paint, and may be laid on with a whitewash or other brush. The color is pale stone color, nearly white. If you wish it to be straw color, add yellow ochre, two pounds in powder; if drab, add four pounds raw umber.

Another good wash is made as follows:—Slake lime with hot water, in a tub, to keep in the steam. When dissolved, and in a half fluid state, pass it through a fine seive. Take six quarts of this lime and one quart of clean rock salt for each gallon of water—the salt to be dissolved by boiling, and the impurities to be skimmed off. To five gallons of this mixture, (salt and lime,) add one pound of alum, half a pound of copperas, three-fourths of a pound of potash, (the last to be added gradually,) four quarts of fine sand, or hard wood ashes. Add coloring matter to suit the fancy.

A correspondent of the Country Gentleman gives the following:—One bushel unslaked lime; half a gallon salt; three pounds alum, powdered; three pounds saleratus. Mix and put in a tight barrel with one head out. If the lime is quite fresh, cold water, —if not, then use hot water. Keep stirring while slaking, adding water as required, so as not to become dry at any time. If it heats dry, it becomes lumpy, and must not be overflowed with water so as to prevent the slaking going on. Stir up well from the bottom. When finished, it may be thick as mush. When to be applied by a brush, make the mixture the consistency of whitewash,—about the thickness of cream. Apply the first coat very thoroughly, filling every crack or interstice between the bricks or in the boards. For wooden fences a second coat of the same material is all that is required. Those who desire to have some other color than white, can add coloring matter to taste.

For Brick Houses.—For the second coat, add to the first-named materials, twelve pounds melted tallow, and mix as before. This coat is impervious to water,—is brighter, looking clean longer than paint, and preserves the cement between the bricks better than paint.

Osta. et Aqua
* Braithwaite.

Dear Sir, Herewith allow me
to lay before you an Article
of my preparation, which
aspires to the general favor
of medical men.

Its distinguishing char-
acteristics will be seen to
be, that it is prepared from
the ultimate alkaloids, in
purity, and contains free,
permanent Hydrocyanic Acid,
a desideratum in Medicines,
not hitherto obtained.

The components are chem-
ically united so as perfectly to
resist the action of time,
and it is believed, such is

the accuracy and purity of the
preparation, as to afford any
energy, certainty and uniform-
ity of remedial effect, sur-
passing any other in use.

My purpose has been to
afford to Practitioners an
Anodyne Expectorant, of such
intrinsic superiority and
worth, as should commend
itself to their attention
and favor.

Allow me to re-
quest, you will give
it a trial, and if you
find it worthy, your in-
fluence.

Very Respectfully Yrs.
James C. Ayer.

To make Black Salve. Take, $\frac{1}{2}$ pound of Lard, $\frac{1}{4}$ pound ^{red.} lead
finely powdered, one ounce beeswax; let the Lard & wax be melted, then add red lead
by degrees, & keep stirring the whole till it is mixed; let it boil gently till it
acquire a black color, stirring it all the time. — You wished directions for
making black salve; & here it is, if you never have occasion to use it so much the
better.

Wm. Phelps Pierson.

Your affectionate & Dearest Son

David Pierson.

side, & ~~was~~ This opinion may change.

soon as he quitted the school in the spring & went to work. - We have a fair prospect of getting through with our work sooner than we did last fall, & then Premiah & Daniel will go to the same school with George, & if Abel's health should be good I propose to continue him at school all next summer. We should be glad to send Phoebe to her former teacher the ensuing six months, but her mother cannot spare her this winter.
